School & Training Institute Fee Management System

- A web-based system to manage student fees, payments, receipts, and financial reports efficiently.

- Designed for schools, colleges, and training centers to digitize fee management.

Project Objectives

- • Automate fee collection process
- • Track paid and unpaid students
- • Generate instant receipts
- • Provide financial reports
- • Reduce manual errors and improve transparency

Target Users

- • Admin – Manages system and reports
- • Cashier – Records payments and issues receipts
- • School Management – Monitors income and dues

Technology Stack

- • Frontend: Next.js
- • Styling: Tailwind CSS
- • Backend & Database: Supabase (PostgreSQL + Auth)
- • Hosting: Vercel

System Architecture

- Browser (User)
- ↓
- Next.js Frontend
- ↓
- neon (Auth + Database)

Core Modules

- • Authentication
- • Dashboard
- • Students Management
- • Classes / Courses
- • Fee Plans
- • Payments & Receipts
- • Reports

Database Tables

- • classes – Stores class/course info
- • students – Stores student details
- • fee_plans – Fee structure per class
- • payments – Payment transactions

Students Module Features

- • Add and manage students
- • Assign classes
- • View payment history
- • Track outstanding dues

Classes / Courses Module

- • Create classes or courses
- • Define default fees
- • List and manage classes

Fee Plan Module

- Admin creates fee plans such as monthly or term-based fees.
- Students in the class are required to pay according to the plan.

Payments Module

- • Select student and fee plan
- • Record payment amount
- • Choose payment method
- • Generate receipt

Receipt System

- • Automatic receipt generation after payment
- • Printable format
- • Includes student, amount, date, and method

Dashboard & Reports

- • Total revenue overview
- • Today’s collection
- • List of unpaid students
- • Monthly financial reports

UI/UX Layout

- • Sidebar navigation
- • Topbar with search and profile
- • Clean, professional card-based layout

Development Phases

- 1. Setup project
- 2. Configure Supabase
- 3. Create database
- 4. Build modules
- 5. Deploy to Vercel

Security Considerations

- • Role-based access
- • Secure authentication
- • Protected environment variables
- • Reliable PostgreSQL database

Future Enhancements

- • SMS/Email reminders
- • Excel/PDF export
- • Multi-branch support
- • Online payments

Conclusion

- A complete digital solution for managing student fees efficiently,
- reducing errors, and improving financial transparency.
